

Using the TKI® assessment with the MBTI® instrument

Feedback is the currency of development. As professional development practitioners, our job is to partner with our clients and, at times, turn the news they are receiving—good or bad—about their performance into productive feedback.

Our assessments help us to provide as much data as possible to our clients. This is so that when we work with them to create action plans and goals, we have tangible markers to show how and where improvement is needed.

Two assessments that work well for this purpose are the Thomas-Kilmann Conflict Mode Instrument (TKI®) assessment and the Myers-Briggs Type Indicator® (MBTI®) instrument. This guide explores how to blend these two tools to get the most out of both instruments and to maximize the data points and information available for practitioners providing feedback for development.

Overview

Given the stress-inducing state of our economy, it is not surprising that conflict in the workplace—between co-workers, team members, and anyone else who might have a difference of opinion—is an ongoing challenge.

The TKI assessment has been used for more than 40 years to help people understand their preferred approach to managing interpersonal conflict. It identifies five different conflict-handling styles, or modes:

- Competing
- Collaborating
- Compromising
- Avoiding
- Accommodating

It explains how and when each one may be used most effectively.

In the figure below, these five modes represent the five major combinations of assertiveness and cooperativeness that are possible in a conflict situation. Everyone is capable of using all five conflict-handling modes. However, most people use some modes more readily than others, and so tend to rely on those modes more heavily.

For more than 60 years, the MBTI instrument has been used to help people understand the

connection between their preferences and their approach to conflict. When they take the MBTI assessment, people learn about their style of being in the world. This also speaks to their method of approaching conflict situations.

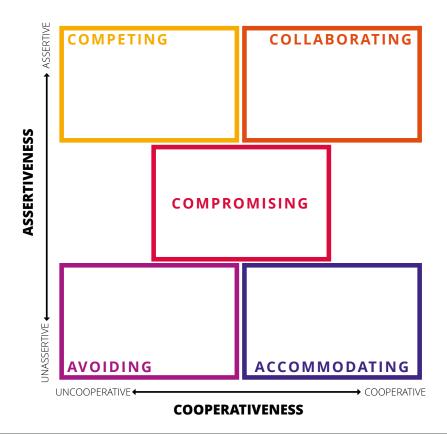

MBTI® preferences and TKI® conflict modes

Let's take a look at the interplay between the MBTI preferences and the TKI conflict modes. The four preference pairs of the MBTI instrument relate to four key questions:

- How do you direct and receive energy? (Extraversion or Introversion)
- How do you take in information? (Sensing or Intuition)
- How do you make decisions? (Thinking or Feeling)
- How do you approach the outside world? (Judging or Perceiving)

Each of these questions is answered toward one pole or the other of its corresponding preference, with varying degrees of clarity. We can combine the answers to these questions (i.e., a person's preferences) with what we might expect within the TKI conflict modes.

The tables on the following pages show how each preference might look within each of the five conflict modes.

Conflict mode: COMPETING

This table shows typical MBTI behaviors in the **competing** mode

Competing	and Energy			
People who prefer Extraversion	People who prefer Introversion			
Need to be heard	Take time to formulate their perspective			
May talk over others	May prefer email to phone or face-to-face discussion			
May interrupt to get their point across	Present ideas that are likely well thought out			
May move quickly from one point to the next	May be persuasive in getting their point across			
May not leave space for other points to be made	May be frustrated with Extraverts who want to talk things out in person			
Competing and Information				
People who prefer Sensing	People who prefer Intuition			
Use specific points to strengthen their argument	Want to focus on the big picture			
Prefer an exact approach with precise information	Want to explore implications of the conflict			
Refer to multiple sources of tangible data	Want to show that their perspective is better and makes more sense			
Present ideas in a step-by-step way	Want to explore new ways of understanding the conflict			
May feel Intuition types' arguments lack practicality	May get overwhelmed with too many details or specifics			
Competing and Decisions				
People who prefer Thinking	People who prefer Feeling			
Want to show why their perspective is logical, clear, and right	Usually will want to end the conflict as soon as possible			
Focus on the bottom line	Are interested in fighting for the people involved			
May be aggressive in getting their ideas across	Advocate to be heard and considered			
Attend to the tasks involved rather than the people	May enter conflict because of values or principles			
May not pay attention to how people will be affected	May focus more on people than on facts			
Competing and Orientation				
People who prefer Judging	People who prefer Perceiving			
May push to end conflict quickly	May enjoy taking an alternative view or position			
May not allow time to consider other views	Want to look at the pros and cons for the sake of argument			
May hold rigidly to their position	Try to be flexible and open, and to encourage change			
Want to have a plan in place to address the conflict if it will be ongoing	May want to keep conflict open longer than others think necessary			
May close a conflict without considering that essential information may be missing	Become frustrated by being rushed to make a judgment			

Conflict mode: COLLABORATING

This table shows the typical MBTI behaviors in the **collaborating** mode

Collaborating and Energy				
People who prefer Extraversion	People who prefer Introversion			
Prefer face-to-face conversations	Prefer to work alone or behind the scenes			
Like people to share information	Need time to reflect before addressing ideas from others			
May throw out multiple suggestions for discussion	May want to work in smaller rather than larger groups or teams			
Want to hear ideas from others	Prefer to work autonomously by dividing up pieces of the conflict to analyze			
Enjoy the interplay of working with multiple viewpoints and expect quick input	May feel Extraverts invade their space and disrupt their ability to concentrate in the moment			
Collaborating and Information				
People who prefer Sensing	People who prefer Intuition			
Want to find the best possible outcome that will work	Search for themes to help them understand positions of the conflict			
Like tried-and-tested methods of working together	Enjoy the process of brainstorming solutions			
Want to build on previous successful experiences	Are not afraid to take risks and see things differently			
Want to dig into as much information and as many sources as possible	Build on others' ideas			
May suggest both sides bring a list of concerns	May see questions or challenges from others as not being collaborative			
Collaborating	and Decisions			
People who prefer Thinking	People who prefer Feeling			
May become defensive when their points are challenged	Work to identify the concerns of both sides			
May push their own agenda more than they listen	Want to find a win-win scenario			
May be more interested in winning than agreeing	May take negative comments personally			
Prefer to get through issues and move on	Approach the situation trying to be helpful			
May want to move through a conflict quickly if it is personal	Keep the needs of people in mind			
Collaborating a	and Orientation			
People who prefer Judging	People who prefer Perceiving			
May formulate an opinion before hearing all the facts	May feel uneasy agreeing because needs might change			
Will propose a plan for moving forward	Need space to explore possible avenues for resolution			
Want to organize and evaluate options	Want to brainstorm options up to the deadline			
Want to align resolution of conflict with larger goals	May feel limited by a plan with too much structure			
May become irritated if finding a mutual solution takes too long	Want flexibility in achieving consensus			

Conflict mode: COMPROMISING

This table shows the typical MBTI behaviors in the compromising mode

Compromisi	ng and Energy		
People who prefer Extraversion	People who prefer Introversion		
May shout out multiple solutions quickly when brainstorming or during a meeting	Prefer to see "deal breakers" in writing before meeting in person		
Attempt to bargain by offering various perspectives and options	Desire equal time during a dialogue		
State their case and the elements they are least likely to give up	May not fight for a chance to speak when many people are speaking at once		
Use a rapid pace to identify the main issues quickly	Are likely to share only their most important points or need		
May become frustrated if Introverts need more time to formulate their opinions	Should not be seen as agreeing just because they haven't spoken up		
Compromising	and Information		
People who prefer Sensing	People who prefer Intuition		
Shoot for the solution that makes the most logical sense	Tend to challenge ideas to fit into the larger scope of the conflict		
Look to maintain the status quo	Need to understand the vision of what the solution will do		
May be persistent in stating their case	Innovate to find a positive middle ground		
Need to see how the solution will be implemented	Consider numerous possibilities before landing on a solution		
Will expect certain standards to be met before any compromise is made	Want to keep things moving toward exploring shared ideas		
Compromising	g and Decisions		
People who prefer Thinking	People who prefer Feeling		
May have difficulty giving up pieces of their argument	Want both parties to leave happy with the outcome		
Are not usually the first to specifies what they want as asset	Desire to find mutually agreed upon solutions quickly		
Are not usually the first to sacrifice what they want or need	Desire to find mutually agreed upon solutions quickly		
Will push for their priorities to be satisfied before considering the needs of others	Desire to find mutually agreed upon solutions quickly Are willing to split the difference in hopes of reaching a resolution more quickly		
Will push for their priorities to be satisfied before considering the needs of others	Are willing to split the difference in hopes of reaching a		
Will push for their priorities to be satisfied before considering the needs of others Are likely to move on and not look back after a decision is	Are willing to split the difference in hopes of reaching a resolution more quickly		
Will push for their priorities to be satisfied before considering the needs of others Are likely to move on and not look back after a decision is made May think expending too much effort on people's feelings is a waste of time	Are willing to split the difference in hopes of reaching a resolution more quickly Appreciate efforts to consider their feelings and perspective		
Will push for their priorities to be satisfied before considering the needs of others Are likely to move on and not look back after a decision is made May think expending too much effort on people's feelings is a waste of time	Are willing to split the difference in hopes of reaching a resolution more quickly Appreciate efforts to consider their feelings and perspective May hold a grudge if they feel unheard or bulldozed		
Will push for their priorities to be satisfied before considering the needs of others Are likely to move on and not look back after a decision is made May think expending too much effort on people's feelings is a waste of time Compromising	Are willing to split the difference in hopes of reaching a resolution more quickly Appreciate efforts to consider their feelings and perspective May hold a grudge if they feel unheard or bulldozed and Orientation		
Will push for their priorities to be satisfied before considering the needs of others Are likely to move on and not look back after a decision is made May think expending too much effort on people's feelings is a waste of time Compromising People who prefer Judging	Are willing to split the difference in hopes of reaching a resolution more quickly Appreciate efforts to consider their feelings and perspective May hold a grudge if they feel unheard or bulldozed and Orientation People who prefer Perceiving Want freedom to choose which aspects of the conflict to		
Will push for their priorities to be satisfied before considering the needs of others Are likely to move on and not look back after a decision is made May think expending too much effort on people's feelings is a waste of time Compromising People who prefer Judging Find relief when a solution is reached quickly Are comfortable making decisions without complete or	Are willing to split the difference in hopes of reaching a resolution more quickly Appreciate efforts to consider their feelings and perspective May hold a grudge if they feel unheard or bulldozed and Orientation People who prefer Perceiving Want freedom to choose which aspects of the conflict to focus on Resent it when people are overly task oriented or drive too		
Will push for their priorities to be satisfied before considering the needs of others Are likely to move on and not look back after a decision is made May think expending too much effort on people's feelings is a waste of time Compromising People who prefer Judging Find relief when a solution is reached quickly Are comfortable making decisions without complete or thorough investigation	Are willing to split the difference in hopes of reaching a resolution more quickly Appreciate efforts to consider their feelings and perspective May hold a grudge if they feel unheard or bulldozed and Orientation People who prefer Perceiving Want freedom to choose which aspects of the conflict to focus on Resent it when people are overly task oriented or drive too hard toward closure		

Conflict mode: AVOIDING

This table shows the typical MBTI behaviors in the **avoiding** mode

Avoiding and Energy					
People who prefer Extraversion	People who prefer Introversion				
May distract from the conflict with unrelated discussions	May not speak up about their position				
May speak about the conflict with everyone but the people involved	May ignore the requests or needs of others				
May express a need for more time to talk through the meaning of the conflict	May use the need for processing time as a reason for not engaging				
May be less engaged in the process if the conflict produces stress	May hope that having no contact will allow the conflict to pass				
May allow the conflict to go on for too long by being unavailable to talk about it	May build resentment if they have previously not felt heard or considered				
Avoiding and Information					
People who prefer Sensing	People who prefer Intuition				
May experience "analysis paralysis" and get lost in research	May get stuck in the brainstorming phase without reaching resolution				
May replay pieces of the conflict over and over again	May get overwhelmed by the gravity of the conflict				
May feel the solution on the table is not yet perfect or good enough	May focus on worst-case scenarios rather than productive solutions				
May use mistrust of information as a reason for not making a decision	May have difficulty solidifying their viewpoint or argument				
May feel that options are not solid enough to move forward	May feel rejected or undermined by questions from Sensing types				
Avoiding ar	nd Decisions				
People who prefer Thinking	People who prefer Feeling				
May create a logical argument for not moving forward	May find the discomfort of the conflict intolerable				
May stall by spending too much time on agendas and prosand-cons lists	May not state their needs in order to end the conflict early				
May create a stalemate by clinging to their position	May be passive-aggressive rather than clear about their position				
May avoid conflict altogether if the other party seems unreasonable	May worry about hurting the other person's feelings				
May have difficulty accepting how they affect others emotionally	May feel paralyzed by their emotional experience of the conflict				
Avoiding and Orientation					
People who prefer Judging	People who prefer Perceiving				
May be confused when too many options are presented	May procrastinate until the problem is solved naturally				
May leave or withdraw than agree to disagree	May appear relaxed with a state of ambiguity				
May be stressed without closure	May want to do what feels good in the moment				
Are usually decisive and likely will create a rationale for not moving forward	May camouflage a lack of decisiveness with a flexible approach				
May change priorities to artificially create a sense of closure	May want to move forward without a resolution				

Conflict mode: ACCOMMODATING

This table shows the typical MBTI behaviors in the accommodating mode

Accommodating and Energy				
People who prefer Extraversion	People who prefer Introversion			
Seek to express agreement and cooperate	May use silence as an expression of agreement			
Want to be seen as a team player	Tend to show support quietly			
May not share their concerns about the conflict	Carefully choose how to give feedback			
May convince themselves that the popular opinion is the best even if they don't agree	Don't like having to make a quick decision without time to process			
Can be suspicious of Introverts who don't share their perspective	Can become resentful if not allowed time to reflect on the best course of action			
Accommodating	and Information			
People who prefer Sensing	People who prefer Intuition			
May find information to support ending the conflict	Create options that will enable both sides to feel somewhat satisfied			
Look for data that builds a bridge between arguments	Look for new information that provides consensus			
Listen for details that reflect common ground between sides of the conflict	Use their flexibility to sacrifice their needs for the greater good			
Need information to be reliable and accurate to move forward	May continue to brainstorm even after a solution is reached			
Desire to honor tradition and what has been maintained before	Seek to identify key issues and then prioritize the needs of the group			
Accommodatin	g and Decisions			
People who prefer Thinking	People who prefer Feeling			
May convince themselves that the conflict is not a priority for them	May be passive-aggressive at any point during the conflict			
Consider their agreement a charitable act to others	Have difficulty sharing concerns they know will not be addressed			
Will remind people of their option to choose even when they sacrifice their needs	See themselves as working toward the greater good			
Try to not see yielding as giving up or losing	Are relieved to end the discomfort of being in a conflict			
Are satisfied if the decision to move forward makes sense, even if they disagree	Work to show compassion for other people's perspectives			
Accommodating and Orientation				
People who prefer Judging	People who prefer Perceiving			
Use structure and planning as a means of collaborating	Demonstrate their flexibility by adjusting to others			
Are courteous, aware of others' needs and prepare their schedules in advance	Want to hear all perspectives before making a decision			
May end an argument or disagreement just to get closure	See making an effort to cooperate as being open to change			
Believe their methods allow others to be involved in their projects	Are present in the moment and assess best possible options			
May yield on issues that are less important to them for the sake of reaching resolution	May give in for now, knowing that things will likely change down the road			

The role of type dynamics in conflict management

We can also consider the role of type dynamics in the way individuals approach conflict. Type dynamics looks at four processes:

- Favorite (or first) process—the function people feel most natural using and rely on the most
- 2. **Second**—supports the favorite process, like a wingman who sweeps in to make sure that what needs to happen will happen
- 3. **Third**—balances the second process
- 4. **Fourth**—largely unconscious. Tends to appear when people are experiencing stress or when things in their life are not balanced

The Grip Experience

In type dynamics, the processes operate in the order above (i.e., 1, 2, 3, 4) when life is going well.

However, when conflict arises, the resulting stress may put people "in the grip" of their fourth function. They begin to rely on this largely unconscious process rather than their favorite process. In addition, a person who typically prefers Extraversion becomes temporarily Introverted when in the grip, and vice-versa.

Another consideration is that, for some people, entering a conflict almost immediately sends them into a "grip" experience and the use of their fourth process. It is important that individuals remember this during a conflict. The people involved may not be operating from their favorite process, and therefore may not be using the best parts of themselves or their best judgment.

The grip experience can also play a role in an individual's use of the TKI conflict modes. Just as people have a preferred conflict mode that they are most comfortable with and use most often, they have less preferred and possibly less comfortable modes. When they are in the grip of stress, they may lean on their preferred conflict mode, even if

it does not suit the situation, because it feels more comfortable than using a less familiar mode.

The key to using the TKI conflict modes effectively is learning to recognize and apply the optimal mode—preferred or not—in a given situation. However, when people are in the grip, they may not have the resources to choose the best possible TKI mode.

MBTI[®] process pairs and TKI[®] conflict modes

Now let's look at how the process pairs—the two middle letters of each type—can help us understand more about approaches to conflict. Looking at the MBTI processes with the TKI conflict modes presents useful information about how conflict is created, managed, and resolved.

First, we can explore some typical conflict triggers in the workplace for people with each of the function pairs.

- STs experience conflict when an established process is ignored or people don't follow protocol. STs want people to approach their work methodically, accurately, and thoroughly.
- SFs experience conflict when people are overly critical of them or impersonal in their approach. Relationships are important to SFs, and they do what they do in the service of people. When others do not step up to do their part, SFs will, albeit reluctantly, stand up to advocate for people who will be affected by it.
- NFs desire harmony above all else, but will be the first people to jump into a conflict when others disregard their values or principles. NFs serve to empower and inspire others by the work they do. They feel resentful when people get in the way of accomplishing this effectively.
- NTs experience conflict whenever someone questions their competence. They pride themselves on their vast fund of knowledge and will challenge anyone who doubts that they are an expert in their area.

The chart below summarizes the interaction of the MBTI process pairs and the TKI conflict modes.

Conflict Mode	STs	SFs	NFs	NTs
Competing	Stress specific facts as vital	Consider the impact on people tremendous	Strive to help people grow	Innovate to make systems better
Collaborating	Collect a wealth of information	Want to serve people on both sides accurately	Ultimately seek harmony	Brainstorm for the best possible solution
Compromising	Use data to justify important positions	Believe everyone can benefit if facts are shared	Want to understand the concerns of both parties	Will split the difference to be fair
Avoiding	Resist change that lacks meaning	Don't want to hurt anyone's feelings	Hope the issue will blow over	May rebel if they don't get their way
Accommodating	Will yield in the absence of supporting data	Will change first if more people will benefit	Will agree to take one for the team	Will lose the battle to win the war

Conflict modes and type flexing

In a conflict situation, the question of what people value and what they are willing to do to preserve what they value comes into play. Most people will keep what they value top of mind when entering into a conflict with others. There is some overlap between the TKI and MBTI tools in this area.

Competing

People who tend to use the competing mode to deal with conflict value asserting their position, sometimes even at the expense of preserving relationships. They will go to great lengths to justify their position and even their behavior during the conflict. For them, the debate may actually be enjoyable at times, and being right or winning may be their ultimate goal. Even if people don't verify as a Thinking type on the MBTI assessment, it is likely that they flex their preference to Thinking when they use the competing mode. This works well when a decision needs to be made quickly, or when a group is unable to make a clear decision.

Collaborating

Collaborating is helpful when a win-win solution is a real possibility. When there is ample time to process the meaning and implications of a conflict, people may be more likely to use the collaborating mode.

Collaborating may also be the preferred mode when

relationships are vital to the functioning and wellbeing of the organization. Here it is important for people to flex to their Feeling preference.

Furthermore, when buy-in is needed for successful execution of an idea, taking the time to collaborate may yield greater benefit than will using the competing mode or focusing on "winning" in the long term.

People are likely to learn more from others when they are able to listen to one another's arguments and use their ability to collaborate. Ideally, the result is the best possible solution to the problem.

Compromising

When time is of the essence, people using the compromising mode are usually at least partially satisfied. Flexing to the Thinking preference to use negotiating skills is important when compromising, as is flexing to the Feeling preference to consider other people's needs and concerns. People who tend to lean on the compromising mode are trying to be fair, and are willing to give up a little bit if it means something better will be created in the long run. But they will not always be the ones to give it up—they expect the same in return from others. The same conflict may resurface in the future with an opportunity for a different solution the next time.

Avoiding

Avoiding may be practical when there is no clear "win" in sight for either party. People who tend to rely on the avoiding mode may feel so uncomfortable with conflict that they would rather tolerate their feelings of anger or disappointment than experience what they go through during conflict. There are times when using this mode is beneficial, such as when someone is being unreasonable and spending time trying to understand what that person wants is not productive. Avoiding may also be appropriate if the debate would be more meaningful later, when more information becomes available.

The challenge of using the avoiding mode is that people may end up feeling like they never get what they want or that things don't get resolved. People may tend to use the avoiding mode more when personal feelings are involved or if they think the other person is being irrational. Thinking types will need to flex their desire to win, and Judging types will need to flex their desire for closure.

Extraverts may want to continue to talk it out but may need to force themselves to walk away from a difficult situation.

Accommodating

Often people who use the accommodating mode are trying to be helpful by deferring to someone with more experience or expertise. This mode can be used to save a relationship or to keep things on an even keel for a team. If you are in the minority during a conflict and people want to move forward regardless of your position, you will have to flex to your Perceiving and Intuition preferences. This is to be open to the possibility that someone else knows better than you, or has more power or authority to move forward. Thinking types will also have to flex to their Feeling preference and curb their arguments for the sake of reaching a solution. This may occur as a means of damage control—for example, if a person with a Thinking preference has hurt someone's feelings or needs to comply as a way of mending fences in order to be able to work together.

Conclusion

It is easy to see the interconnection between the TKI and MBTI assessments, as there are many commonalities between conflict modes and type preferences.

The goal is to use TKI conflict modes and MBTI preferences appropriately to encourage optimal functioning and a successful resolution in a conflict.

About The Myers-Briggs Company

In our fast-changing world, your edge lies in harnessing 100 percent of your talent – whether you're at work, home, college, or anywhere in between. Your success and sense of fulfilment aren't just about what you know and what you can do, they hinge on your relationships and interactions with others.

The Myers-Briggs Company empowers individuals to be the best versions of themselves by enriching self-awareness and their understanding of others. We help organizations around the world improve teamwork and collaboration, develop inspirational leaders, foster diversity, and solve their most complex people challenges.

As a Certified B Corporation®, The Myers-Briggs Company is a force for good. Our powerfully practical solutions are grounded in a deep understanding of the significant social and technological trends that affect people and organizations.

With over 60 years in assessment development and publishing, and over 30 years of consultancy and training expertise, a global network of offices, partners and certified independent consultants in 115 countries, products in 29 languages, and experience working with 88 of the Fortune 100 companies, we're ready to help you succeed.
